

# Hello, LaTeX!

Jeremy Evert

September 3, 2026

## 1 A familiar face

Hello, world! This document was created and compiled from PowerShell. But you can also compile this from anywhere that has a good TeX compiler. VS Code can do it. And MikTeX also has some tools to build this.

## 2 The Build Pipeline

The file `hello.tex` is plain-text source code. The file `hello.pdf` is the compiled durable artifact.

- Git can track meaningful changes to the source.
- LaTeX controls document structure and typesetting.
- The PDF can be rebuilt from the command line.

## 3 A Tiny Bit of Mathematics

$$a^2 + b^2 = c^2$$
